## Purpose of the Post

To conduct research in computational psychiatry and cognitive neuroscience, as part of the ESRC-funded project “A Computational Approach to Understanding Maladaptive Cognition in Depression”.

## Key Tasks

### To contribute to the design of experiments, in consultation with the Principal Investigator.

- A series of experiments will be designed to investigate interactions between value-based decision making and learning and biases in attribution, leveraging computational models, across online, clinical and fMRI studies.

### To be responsible for setting up and running experiments, ensuring that they are appropriately supervised and supported.

- Ethical approval will need to be sought from the Departmental Ethics Committee prior to the commencement of experiments.
- Experiments will need to be programmed in specific software (JavaScript).
- Experiments will need to be implemented in new experimental set-ups that will require advance planning and development.
- Small scale pilot experiments will need to be run that can establish the viability of the planned experiments.
- Participants will need to be recruited from the undergraduate population at the University, online platforms, and clinical populations, to take part in the experiments.

### To maintain a permanent record of experimental details, to analyse and archive data generated from experiments and write up the results.

- Behavioural, questionnaire and neuroimaging data will need to be analysed, using computational modelling and advanced statistics, to generate results.
• The results will need to be interpreted in the context of the relevant literature.

To prepare and present findings of research activity to colleagues and at scientific meetings.

• Results will be disseminated in scientific meetings (conference abstracts will need to be written and submitted from time to time). The post-holder will have an opportunity to present findings at scientific meetings.

To contribute to writing, submission and revision of manuscripts to be published in appropriate peer-reviewed journals, collaborating with others as necessary.

• Results and interpretation will be documented in papers that will be prepared for submission to scientific journals for peer-review and publication.

To contribute to the overall activities of the research team and the department as appropriate.

• The post-holder will be required to contribute to scientific discussion in regular laboratory meetings, advise doctoral students about planning and preparation of their own experiments, and offer advice and opinion on the analysis and interpretation of results.

To contribute to the induction and direction of other research staff and students if so requested by the Principal Investigator.

• New staff and students that may join the laboratory in the future will need to be introduced to practicalities of using specific equipment and software for experiments.

To carry out any other duties as are within the scope, spirit and purpose of the job as requested by the Principal Investigator

Other Duties

The duties listed are not exhaustive and may be varied from time to time as dictated by the changing needs of the College. The post holder will be expected to undertake other duties as are within the scope, spirit and purpose of the job as requested by the Principal Investigator.

The post holder may be required to work at any of the locations at which the business of Royal Holloway is conducted.

Internal and external relationships

The following list is not exhaustive, but the post holder will be required to liaise with: students, other researchers within the Psychology Department, as well as other departments at RHUL, clinicians at local NHS trusts, and collaborators of the research team at other universities in UK and abroad.
